Perceptions of Political Violence

Recently, political violence in the United States has been an increasingly salient public issue. Previous statistical connections have been made between low yearly income, low education, and right-wing political affiliation to a higher acceptance of political violence (Jasko et al., 2022). Using a dataset published through Harvard, this study aims to address the white population and their beliefs regarding current issues. The dataset was previously assembled by researchers studying the connection of people's faith to political tendencies. Data is currently being analyzed and results will be presented at BURS.
